Mofluid Mobile App Builder Release Notes 1.10.0

This release note lists down the Features and issue fixes for the Mofluid Extension that we have done in this release:

New Features

1. Support Push Notification for Android and iOS Platform. But to achieve this user needs to use the Mofluid_PushNotification Add on Extension with it.

2. Support ShipMyID Features if User uses the Mofluid_ShipMyId Extension with it.

3. Now Mofluid App Provides your Custom Logo on All the Screens.

4. Support Free Shipping, Flat Rate and Table Rate Shipping Method.

5. Mobile App are generated through latest version of Phonegap Framework i.e. 3.5.

Bug fixes:

1. Improvement of existing App UI.

2. Fixing Extension for those magento users who are using prefix in their table name.

3. Some Minor Bug for Cart functionality has been fixed.

4. Icons of App and Cart number display view has been updated.

5. InAppBrowser Issue has been fixed which solve the problem to close or go back to the App after Payment Completion.

6. Mofluid Build Generation Algorithm and Procedure has been updated to reduce the number of failure action while generating the app.
